Acergy Overview

SURF

We are experts in the design, installation and commissioning of subsea infrastructure, umbilical, riser and flowline systems (SURF). Activities in this area constitute the most significant proportion of our business.

Survey / Inspection, Maintenance and Repair (IMR)

We provide a comprehensive range of subsea inspection, maintenance and repair services to keep oil and gas fields worldwide producing at optimum capacity. Our services include both diver and remotely operated vehicle inspection.

Conventional Field Development

Our deepwater expertise is complemented by conventional construction skills and capabilities that help our clients solve complex hydrocarbon extraction and field development problems, together with our hook-up and pipeline installation tie-ins expertise.

Revenues – 2008
\$843.1M

Project Objectives

Create a model for quantifying implications of looking at a project from the basis of CO₂, Cost, Quality & Time.

Explore how innovative collaboration can have a positive impact and how organisations can collaborate in new ways – including best practices from global leaders.

Establish a roadmap that outlines how the model could be implemented including the organisational advantages from both a commercial and positioning standpoint.

Propose and assess new or revised business models which will be of great interest to other companies.
